DETAILED ACTION

Election/Restrictions

1. This application contains claims 13-19 and 21-22 drawn to an invention nonelected with traverse in Paper No. 10. A complete reply to the final rejection must include cancelation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.
2. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.
4. Claims 27-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 4,258,281 to Calfo et al. in view of common knowledge in the art.

Calfo et al. clearly teaches the construction of a laminated flux shunt for dynamoelectric machine stator comprising:

- a stator core (3) having an radial inner surface and opposing axial ends; and
- a flux shunt (51, 91) disposed adjacent and proximate to the radial inner surface of the stator core and one of the opposing axial ends.

Art Unit: 2834

However, it fails to disclose a flux shunt formed from an electrically resistive, thermally conductive, magnetically permeable material, and comprises a magnetically isotropic (as defined by The American Heritage® Dictionary of the English Language, Third Edition copyright © 1992 by Houghton Mifflin Company) material as powdered iron.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to form the shunt of an electrically resistive, thermally conductive, magnetically permeable material, and comprises a magnetically isotropic material as powdered iron, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice.

In re Leshin, 125 USPQ 416.

Allowable Subject Matter

5. Claims 1-12, 20, and 23-26 are allowed.

6. The following is an examiner's statement of reasons for allowance: the prior art of record, taken alone or in combination, fails to disclose a flux shunt for use in a power generator as claimed on independent claim 1, comprising:

a convex outer surface adapted to be disposed adjacent to a radial inner surface of the stator core, and

a concave inner surface adapted to be disposed adjacent to a radial outer surface of the rotor;

on independent claim 6, comprising:

a flux shunt having a convex outer surface, the convex outer surface disposed adjacent to the inner surface of the stator core; and

Art Unit: 2834

on independent claim 20, comprising:

a flux shunt radially disposed adjacent to the inner surface of the stator at approximately an end of the two ends of the stator.

7. Dependent claims 2-5, 7-12, and 23-26 are considered allowable by their respective dependence on independent claims 1, 6, and 20.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.

9. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
